

The ES<sup>3</sup> Box Kit is a revolutionary, patent-pending design that allows installing the best-in-class Durafil ES<sup>3</sup> filter into applications where there is no downstream space and when a face-mounted prefilter is required.

Alternative box filter solutions, such as rigid cells and aluminum separator style filters, use outdated filtration technology and lack the total cost of ownership benefits a filter with a V-bed configuration brings.

The ES<sup>3</sup> box kit is a secondary system ordered separately from the Durafil ES<sup>3</sup>. The kit can be assembled in the field with no tools required. This framing system will mount into existing HVAC filter frames using 12" style spring fasteners. Under normal usage, the ES<sup>3</sup> Box Kit is expected to last a minimum of 10 years.

When the filter is in need of replacing, the new Durafil ES<sup>3</sup> is easily inserted into the framing system. There is no additional time required for filter changes.

Each ES<sup>3</sup> box kit comes with eight gasket seals to allow for sealing between Durafil ES<sup>3</sup> filters and the frame kit as well as between the frame kit and the HVAC holding frame.

The ES<sup>3</sup> Box Kit allows installations with front-load only the ability to install the optimum V-bank air filter; the Durafil ES<sup>3</sup>

- Reusable for up to 10 years in service
- Easy replacement using standard Durafil ES<sup>3</sup> filters
- Brings low total cost of ownership to box-filter only applications
- Easily assembled in the field with no tools. Clips to hold prefilter to Durafil ES<sup>3</sup> face: 2" = C-84-2 4"
- 4 Standard Sizes: 24x24, 12x24, 20x24 and 20x20

Part Number	Size
855081601	24 x 24
855081603	12 x 24
855081602	20 x 24
855081604	20 x 20
